The 5 Best JavaScript Libraries for Form Validation
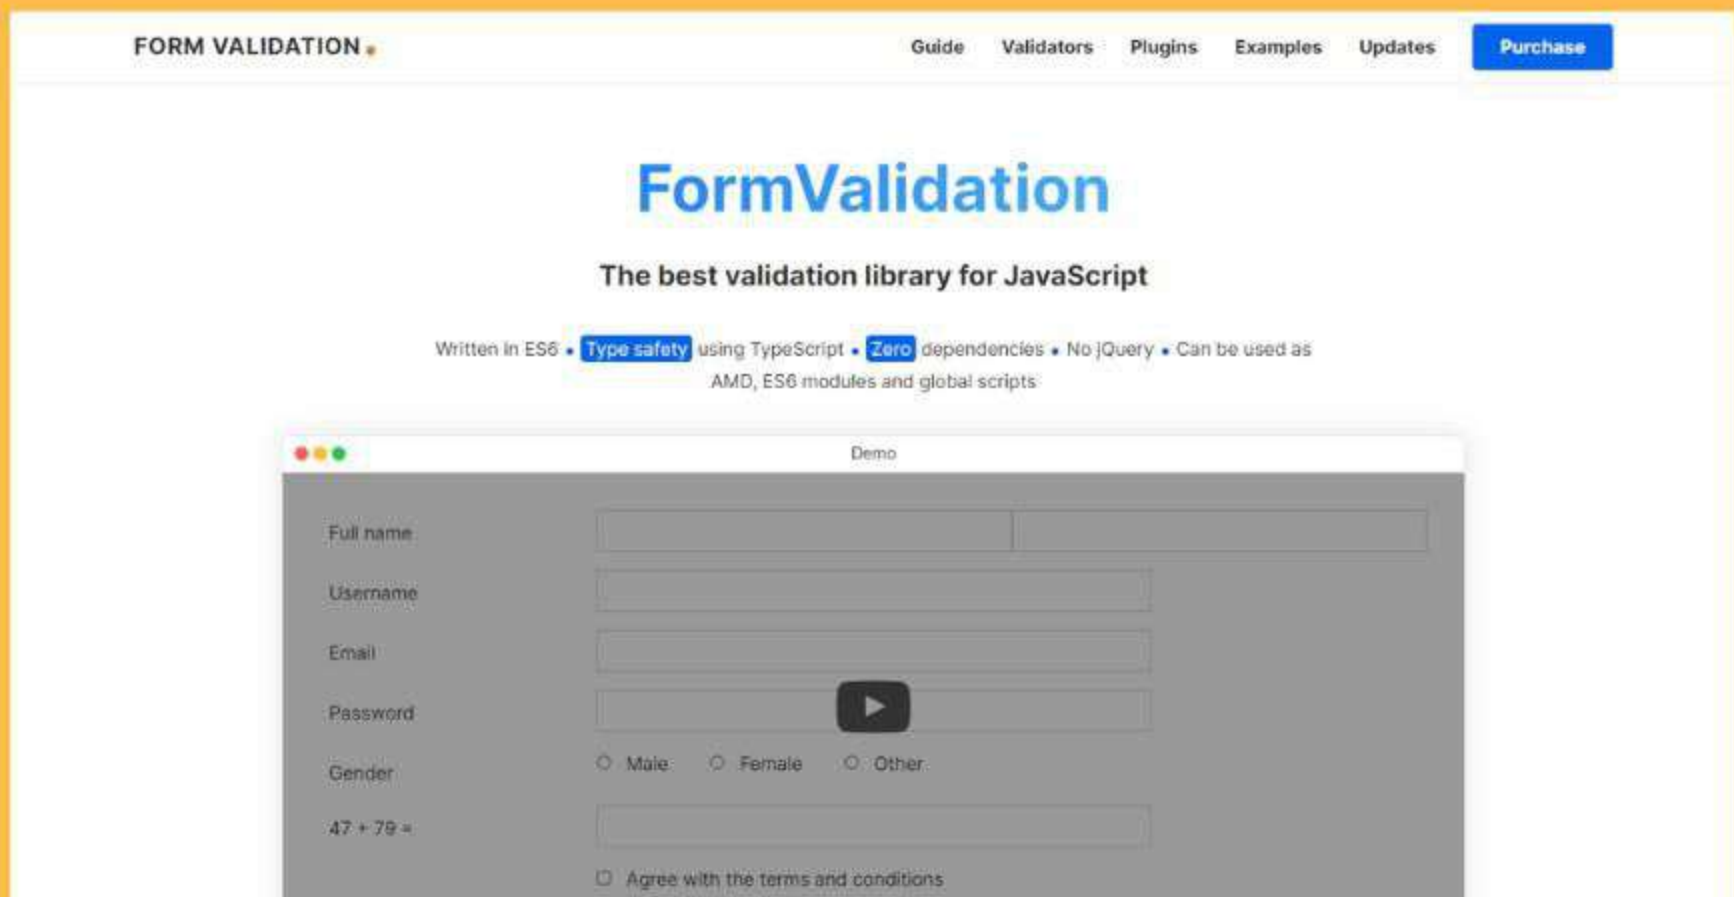

@richwebdeveloper

Full-stack Web Development

1. FormValidation -

FormValidation is popular because:

- **Lots of Built-in Checks:** Offers email and password validation checks.

- **Design Your Checks:** Custom checks can be made if standard ones fall short.

- **Instant Feedback:** Provides instant user feedback.

2. v8n -

v8n is cool and user-friendly:

- **Plain and Simple:** Setting rules with v8n is as simple as writing a sentence.

- **Add Custom Rules:** You can put in more rules if you want.

- **Versatile:** It's not just for websites. You can use it in other places like Node.js too.

3. validator.js –

People have a soft spot for validator.js:

- **Straightforward:** Perfect for checking emails and dates for accuracy.

- **Stands Alone:** It doesn't lean on other tools to do its job.

- **Multi-use:** Great for websites and even for checking data on servers.

4. Pristine –

Pristine is neat, tidy, and looks good:

- **Feather-light:** It's so small, meaning websites can run fast.

- **Aesthetic Alerts:** Errors are displayed attractively, and customization is possible.

- **Universal:** Pristine works on all browsers, old or new.

5. facile-validator -
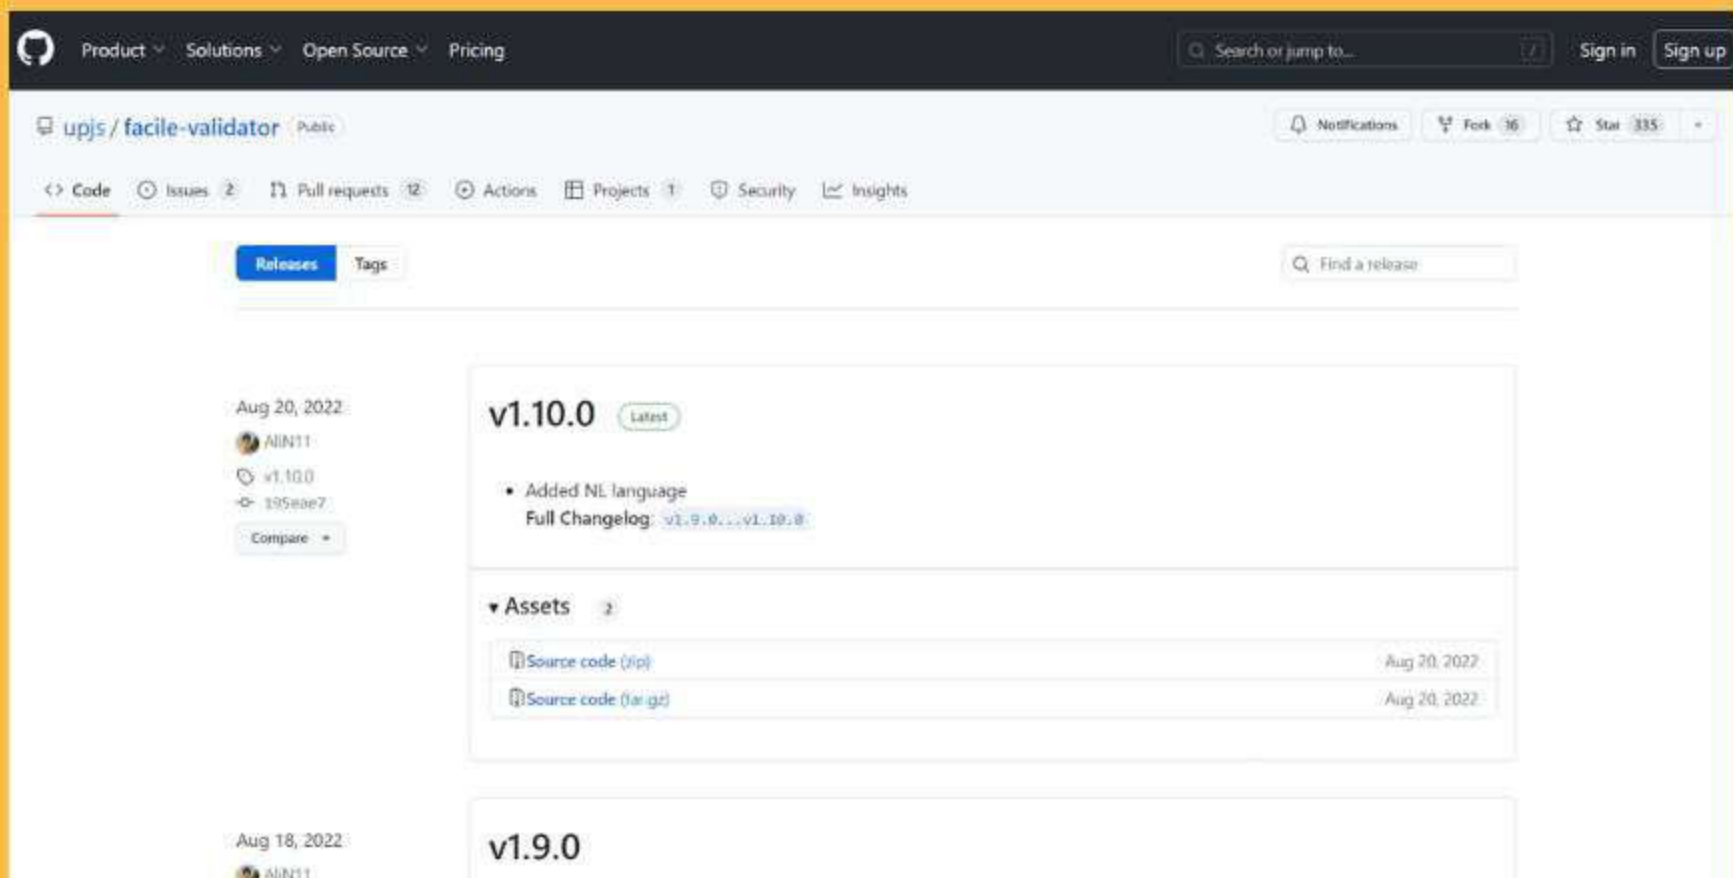

This newcomer is gaining fans quickly:

- **Easy Rule Setting:** With facile-validator, setting up checks is a walk in the park.

- **Swift Checks:** Performs speedy checks, even for typically slower tasks.

- **Lean and Mean:** It's light and focuses only on the important stuff.
